We extend a special thanks to the farmers, agribusinessmen, County Extension Officials and others who voluntarily provided basic data used to prepare the statistics presented in this publication.

MESSAGE FROM THE COMMISSIONER

Dear Fellow Georgians:

While there are many uncertainties facing those whose livelihoods depend on farming, the one thing that remains certain is change. These transformations continue to come about through many avenues including the development of new technology, the volatile economy and the uncertainty of the weather from year to year.

Alfred North Whitehead, an English philosopher once said, "We think in generalities, but we live in detail." So that those of us involved in this industry know where we are going and where we have been, the Georgia Agricultural Statistics Service (GASS) records crop successes and failures. This agency works in cooperation with the Georgia Department of Agriculture to monitor, summarize, and report trends in the State's agricultural sector.

Georgia Agricultural Facts is designed as a reference guide for farmers and agribusiness professionals, as well as communicators, students, teachers, economists, public officials and other policy makers who rely on accurate agricultural data. The information compiled in this particular edition includes data from over four decades of Georgia agriculture. It not only provides a "bird's eye view" of farming during this period, but also serves to document our State's agricultural heritage while reviewing its continuing progress.

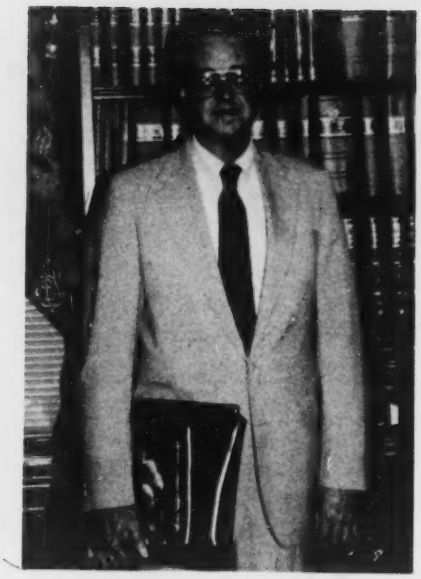
Few states can rival Georgia in terms of agricultural diversity. The data provided in this publication only serves to reinforce how blessed our State has been. Published by the Georgia Department of Agriculture under a cooperative agreement with the National Agricultural Statistics Service and the United States Department of Agriculture, **Georgia Agricultural Facts** is dedicated to the continued growth and success of Georgia's agricultural industry and to the commitment of our farmers, who sustain us with their labors and provide the basis for our State's economic progress.

Sincerely,

Tommy Irvin
Commissioner,
Georgia Department of Agriculture

FOREWORD

"As a rule the most successful man is the man who has the most information." This statement by Disraell is probably more true today than when it was written.



One purpose of this 1990 reference edition of the Georgia Agricultural Facts is to provide historical information as a basis for current and future decision making. Included are a wide range of state estimates from 1956 through 1989 and county data from 1983 through 1989.

The decade of the 1980's was very turbulent times for Georgia agriculture. Conditions mostly outside the control of producers resulted in changes that will have far reaching influences on the future make-up of the agricultural industry in Georgia. The decade ended with a relatively good year in 1989 and a positive attitude by many of the state's producers. However, the 1990's will present new problems and challenges that will have to be addressed. The Georgia Agricultural Statistics Service pledges its best effort to continue providing accurate and timely information for future decision making.

We are continually indebted to thousands of voluntary reporters from the Georgia farming and agribusiness community. Each reporter gives his time and effort to report various information that relates to his farm and business activities. Without this voluntary cooperation, it would be impossible to make reliable estimates or prepare this publication. Thanks to each of you for your cooperation and support.

Appreciation is given to the office staff of the Georgia Agricultural Statistics Service for the day to day dedication required to prepare agricultural estimates and this publication. A special word of thanks is also reserved for the fine staff of field and office enumerators who spend many hours collecting information from Georgia farmers and agribusinesses.

Sincerely,

Larry E. Snipes
State Statistician

FIELD CROPS

HIGHLIGHTS - 1989 CROP YEAR

Georgia's field crops responded favorably to the above normal rainfall and moderate temperatures in 1989. As a result, most crop yields improved from 1988. Corn and hay crops set record high yields in 1989. The only crops that failed to improve yields from 1988 were wheat, oats, rye and tobacco. These crops were hurt by insects and diseases and too much rain during the early summer.

Planting was generally completed on schedule, although many soybeans were planted late. Excessive rains during June and July prevented the double cropped soybeans from being planted on time. Rains continued through July and by early August, crop prospects were especially bright. However, most crops did not live up to the bright expectations of early August. Diseases and insects, along with drier conditions during August, took their toll. Peanuts, cotton and soybeans were especially affected.

The drier early fall weather provided good harvesting conditions for corn, cotton, soybeans and peanuts. Favorable conditions remained through the fall, except for a wet period in late September and early October. This period was especially damaging to peanuts, as harvesting losses further reduced yields. For soybeans the rains came too late to overcome insect damage and the dry weather of late summer and early fall.

Prices received for most field crops in 1989 failed to keep up with the improved yields. Prices for major cash crops such as corn and soybeans, were well below those of 1988. Peanut prices showed a more moderate decline. Cotton and tobacco prices improved from a year earlier, along with grain sorghum and winter wheat.

PEANUT ACREAGE UNCHANGED, YIELD UP

Georgia's 1989 peanut yield averaged 2,700 pounds per acre, 70 pounds more than in 1988. However, the bumper crop that was predicted early in the year, never developed. Excessive rains during June and July interrupted spraying schedules and diseases developed late in the season. Harvested acres totaled 685,000, unchanged from 1988. Production amounted to 1.85 billion pounds, up 3 percent from the 1988 production of 1.80 billion pounds. Georgia accounted for 46 percent of the total U.S. peanut production in 1989. Prices averaged 27.4 cents per pound, compared with 28.0 cents per pound for the 1988 crop. The value of the 1989 peanut crop, at nearly $507 million, is $2.3 million more than in 1988.

CORN RECORD HIGH YIELD

The above normal rainfall of June and July was nearly ideal for Georgia's corn crop, just the opposite of 1988. The 1989 crop averaged a record high 95 bushels per acre, 10 bushels per acre above the previous record in 1982. Planted acres increased for the first time in 5 years to 610 thousand acres. Acreage harvested for grain totaled 550 thousand acres, an increase of 50 thousand acres from 1988. About 40 thousand acres of corn were cut for silage, compared with 50 thousand acres in 1988. Although irrigation was not as necessary as in other years, about 175 thousand acres harvested for grain were watered at least one time. The yield for irrigated corn averaged 125 bushels per acre. Dryland corn harvested for grain totaled 375 thousand acres and averaged 81 bushels per acre. This is the highest yield for dryland corn since these records began in 1982. Corn silage yield averaged 14.5 tons per acre in 1989, compared with the record high of 15.0 tons per acre in 1983.

Grain production totaled 52.3 million bushels, 69 percent more than in 1988. Prices averaged $2.70 per bushel, 32 cents per bushel less than the 1988 price. Total value of the grain produced amounted to $141 million for 1989, compared with a value of $93.6 million for the 1988 crop.

COTTON ACREAGE DOWN, YIELD UP

Cotton planted in 1989 dropped 24 percent or 85 thousand acres from 1988 to 265 thousand acres. This was in response to the depressed prices of 1988 and the ASCS program requirement of 25 percent reduction in acres. Acreage harvested, at 260 thousand acres, dropped 17 percent from the 315 thousand acres harvested in 1988. Yield per harvested acre averaged 631 pounds of lint, an increase of 67 pounds per acre from 1988's yield. Production amounted to 342 thousand bales, down 8 percent from 1988. Prices farmers received in 1989 improved by 9.6 cents to 64.8 cents per pound. This was the highest average price for cotton since 1983. Value of production totaled $106 million, 9 percent more than the $98.0 million crop of 1988.

SOYBEAN YIELDS INCREASE, PRICES DECLINE

Soybean yield in 1989 averaged 26 bushels per acre, 1 bushel above the 1988 yield and the highest since 1982. Yield prospects in early August were at a record high level. However, dry weather and insects in August and September steadily reduced yield to 2 bushels below the record yield set in 1979. Planted acreage totaled 1.15 million acres, an increase of 24 percent from the 930 thousand acres planted in 1988. Harvested acreage, at 1.10 million acres, exceeded 1988's harvested acreage by 22 percent. Total production, at 28.6 million bushels, was 27 percent more than the 22.5 million bushels produced in 1988. Marketing year average prices for 1989 fell $1.70 per bushel from 1988 to $5.60 per bushel. The value of production amounted to $160 million, 2 percent less than the value of the 1988 crop.

TOBACCO ACREAGE UP, YIELDS OFF

Georgia's tobacco acreage in 1989 continued the climb of the previous 2 years, reflecting the increase in the poundage quota. Harvested acreage amounted to 40 thousand acres, a 5 percent increase from 1988 and the largest acreage since 1983. Yield per acre, at 2,180 pounds, failed to improve from 1988. The wet weather produced a lighter weight leaf than expected earlier in the year. The 1989 yield was 80 pounds below 1988, and 10 pounds below the extremely dry year of 1986. Production totaled 87.2 million pounds, up 2 percent from 1988. Marketing year prices averaged $167.00 per hundred pounds, 3 percent above 1988. Value of production at $146 million, increased 4 percent from the $140 million of 1988.

SMALL GRAIN YIELDS DOWN

The 1989 wheat crop was hard hit with powdery mildew and Hessian fly. Yields fell to 32 bushels per acre, 11 bushels less than the record tying yield of 1988. Acreage harvested for grain jumped 40 percent from 1988 to 700 thousand acres. This resulted in total grain production of 22.4 million bushels, up 4 percent from the 21.5 million bushels produced in 1988. Wheat price gained 49 cents per bushel from 1988 to $3.70 per bushel. The value of the 1989 wheat crop amounted to $82.9 million, 20 percent more than the 1988 crop.

Oats and rye yields also dropped from 1988, averaging 59 and 23 bushels, respectively. Oat production totaled 4.13 million bushels, up 46 percent from 1988. Rye production, at 1.61 million bushels, was 15 percent below 1988. Prices also declined from 1988, with rye at $2.25 down 36 cents per bushel, and oats down 16 cents to $1.65 per bushel.

HAY RECORD HIGH YIELD

Hay crops in 1989 averaged a record high 2.7 tons per acre. Production totaled 1.62 million tons, an increase of 29 percent from 1988. Acreage harvested amounted to 600 thousand acres, compared with 570 thousand acres harvested in 1988.

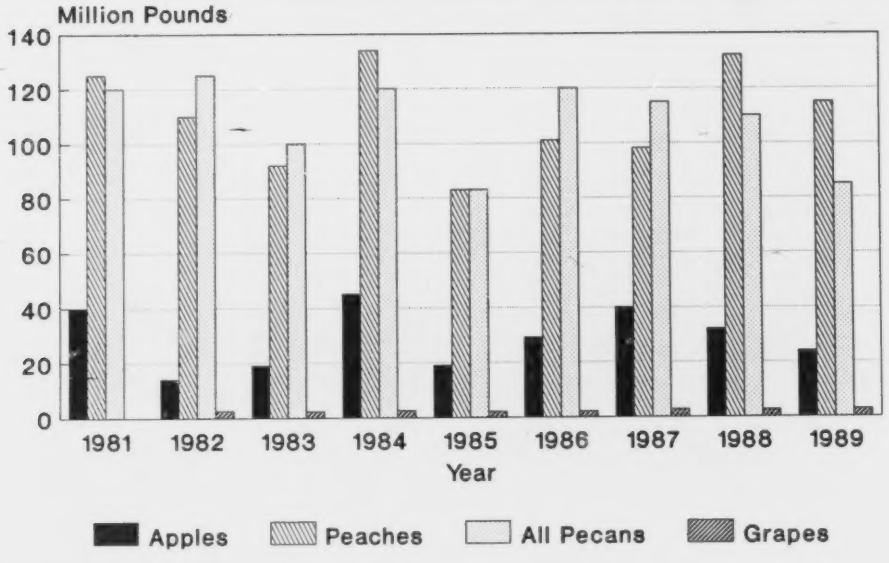
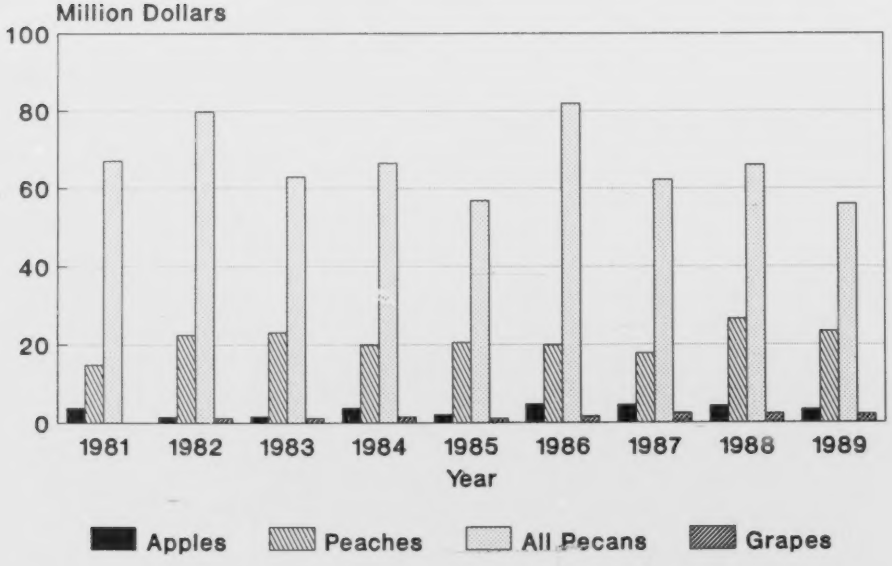
1/ Data as obtained from area frame samples. These data do not represent official estimates of the Agricultural Statistics Board but provide raw data as obtained from survey respondents. The purpose of these data is to portray trends in soybean production practices.

FRUIT AND NUTS - Utilized Production, Georgia, 1981 - 1989



FRUIT AND NUTS - Value of Production, Georgia, 1981 - 1989



FRUITS, NUTS, AND VEGETABLES

HIGHLIGHTS - 1989 CROP YEAR

Georgia's fruit and nut crops in 1989 suffered from mild winter temperatures, late spring freezes and too much rain during the summer. As a result, production of apples, peaches and pecans dropped from 1988. Grape production, however, showed a slight improvement from 1988's drought reduced crop. Vegetable crops benefitted from the increased moisture supplies in 1989, as sweetpotato and fresh market tomato production and yield exceeded 1988. Prices remained favorable for fruits and nuts as well as vegetables. Only grapes and sweetpotato prices failed to improve from 1988.

PECANS

Total pecan production in Georgia in 1989 amounted to 85 million pounds, 23 percent less than 1988 and the smallest production since 1985. The crop was plagued with many problems throughout the year. The warm winter weather caused Stuarts and other varieties to leaf out late. This caused a poor nut set. Excessive rainfall during June and July prevented many producers from spraying properly for disease and scab became widespread. Scab hit the Schley and Wichita varieties especially hard, but was not as prevalent in Stuarts and seedling varieties. Late August and early September were cool and cloudy which prevented the nuts from developing. Heavy infestations of stinkbugs added further damage to the crop.

Georgia's share of the national pecan crop fell to 34 percent in 1989 from 36 percent in 1988. Despite the large drop in production in 1989, Georgia's production was still 30 million pounds more than the second highest producing state, Texas.

Prices farmers received for pecans in 1989 averaged 65.7 cents per pound, 5.8 cents per pound more than the 1988 crop. Prices early in the harvest season were disappointing, but recovered later, when the full extent of the crop losses became known. Value of pecans produced in 1989, at $55.9 million, fell 15 percent from 1988, and was the lowest value crop since 1979.

PEACHES

Georgia's peach crop also suffered from poor weather conditions in 1989, especially in the extreme southern part of the State. The warm winter temperatures did not allow adequate chill hours for many varieties to produce a crop. Other varieties bloomed early, but were wiped out by freezes during March and April. However, growing conditions in the central and northern areas of the State were more favorable. Production in those areas was near normal, but because of the excessive moisture in June and July, brown rot became a problem. As a result, total peach production in Georgia dropped 11 percent in 1989 to 125 million pounds. Utilized production amounted to 115 million pounds, 13 percent below 1988. Yield per bearing age acre averaged 6,250 pounds, compared with a yield of 7,370 in 1988. Bearing age acres, at 20 thousand, increased 1 thousand acres from 1988.

Prices farmers received for peaches in 1989 improved slightly from a year earlier, averaging 20.2 cents per pound. Value of production totaled $23.3 million, 12 percent less than the 1988 crop, but the second most valuable crop of record.

APPLES

Total apple production in Georgia amounted to 25 million pounds in 1989, down 24 percent from the 33 million pounds produced in 1988. The April freeze severely damaged some varieties, while other varieties escaped injury completely. Several orchards in north and central Georgia also suffered from hail damage. The wet conditions during June and July interrupted apple spraying schedules and diseases became a problem. Utilized production dropped 25 percent from the previous year to 24 million pounds. Prices averaged 14.0 cents per pound in 1989, compared with 13.1 cents in 1988. This put value of utilized production at $3.35 million, 20 percent below 1988's value of $4.2 million. Bearing age acreage in 1989 dropped 500 acres to 3,500. Yield per bearing acre averaged 7,140 pounds per acre in 1989 compared with 8,250 in 1988.

GRAPES

Georgia's 1989 total grape production amounted to 2,800 tons, 12 percent above 1988's drought reduced crop. The 1989 crop, however, was limited by excessive rain during pollination which hurt fruit set. Lack of rain during August affected size. Utilized production, at 2,700 tons, exceeded 1988's utilized production by 8 percent. Average prices fell to $781 per ton, down $130 per ton from the record high $911 in 1988. Value of utilized production dropped 7 percent from 1988 to $2.11 million, while bearing acreage was unchanged at 1,700 acres. Yield per bearing acre averaged 1.65 tons per acre, compared with 1.47 tons per acre in 1988.

SWEETPOTATOES

In 1989, Georgia farmers harvested 4,800 acres of sweetpotatoes, from 5,000 acres planted. This was an increase of 7 percent in harvested acres and 4 percent in planted acres from 1988. Yield per acre, at 170 hundredweight per acre, improved slightly from the 160 hundredweight per acre in 1988. Production totaled 816 thousand hundredweight, up 13 percent from 1988. Prices declined slightly in 1989, to $14.90 per hundredweight, compared with $15.00 per hundredweight in 1988. Value of production totaled $12.2 million, 13 percent more than the $10.8 million of 1988.

TOMATOES

Fresh market tomato production in Georgia totaled 540 thousand hundredweight in 1989, an increase of 3 percent from 1988. All of the increase was attributed to an 11 percent improvement in yield per acre to 200 hundredweight per acre. Planted acreage, at 2,800 acres, and harvested acreage, at 2,700 acres, were both down 7 percent from 1988. Prices averaged $24.00 per hundredweight in 1989, up 8 percent from 1988. Value of production amounted to almost $13.0 million, 11 percent more than 1988.

ONIONS

Vidalia onion production in Georgia totaled 635 thousand hundredweight in 1989, the first year onion estimates were made by the Georgia Agricultural Statistics Service. Planted acres amounted to 4,800 acres, of which 4,700 were harvested. Yield averaged 135 hundredweight per acre. Prices farmers received averaged $27.20 per hundredweight, which puts value of production at $17.3 million.

SNAPBEANS

Process snapbean production in Georgia totaled 6,210 tons from 2,700 acres harvested. Yield calculates to 2.3 tons per acre. Prices averaged $253 per ton which puts value of production at $1.57 million.

Turkeys - $23,285,000

GEORGIA'S RANK NATIONALLY—1989

Number Broilers Produced - Second

Broiler Value of Production - Second

Number Eggs Produced - Fifth

HIGHLIGHTS–1989

The total farm value of poultry and eggs produced in Georgia amounted to $1.57 billion for the 1989 production year, up 17 percent from 1988. Value of production from broilers totaled $1.25 billion, up 17 percent from 1988. The value of production for all eggs was $285.7 million, up 24 percent from 1988. The value of production for turkeys decreased 22 percent to $23.3 million in 1989.

BROILER PRODUCTION

Georgia broiler producers produced 812.0 million broilers in 1989 for the seventh consecutive year of record high numbers. Production increased 5 percent from the 772.8 million broilers produced in 1988. Pounds produced in 1989 totaled 3.57 billion, a 5 percent increase from 1988's 3.40 billion pounds. The average price received per pound for broilers in 1989 was 35.0 cents per pound. This is 3.5 cents more than last year. Georgia ranked second to Arkansas in the number of broilers produced and accounted for 15 percent of the Nation's total broiler production in 1989.

EGG PRODUCTION

Eggs produced in Georgia for the year ending November 30, 1989, totaled 4.23 billion, 1 percent less than the 4.29 billion eggs in 1988, and 5 percent less than the 4.48 billion eggs in 1987. The number of layers averaged 17.6 million in 1989, 1 percent less than the 17.8 million layers the previous year. In hatching egg flocks, the average number of layers was up 2 percent in 1989, to 5.99 million from 5.87 million in 1988. The average number of layers in table egg flocks was 11.9 17.8 million layers the previous year. In hatching egg flocks, the average number of layers was up 2 percent in 1989, to 5.99 million from 5.87 million in 1988. The average number of layers in table egg flocks was 11.6 million in 1989. All layers in Georgia produced an average of 241 eggs per hen in 1989, the same as in 1988. Hatching egg flocks produced 1.34 billion eggs during 1989, 2 percent more than the previous year. Table egg flocks produced 2.89 billion eggs in 1989, 3 percent less than 1988. The average price for all eggs in 1989 was 81.0 cents per dozen, 16.6 cents per dozen more than 1988. Table egg prices averaged 59.8 cents per dozen, up 18.9 cents from the previous year. Hatching egg prices averaged 132.0 cents per dozen, up 8.0 cents per dozen from 1988. Georgia's total egg production was 68 percent table eggs and 32 percent hatching eggs. Georgia ranked fourth in the Nation in 1989 in the average number of layers and fifth in total egg production. California was the leading state in layers and egg production followed by Indiana. Pennsylvania and Ohio were third and fourth, respectively, in egg production. Georgia ranked second in value of eggs produced behind California in 1989.

TURKEY PRODUCTION

Turkeys produced in Georgia during 1989 totaled 1.90 million birds, down 21 percent from 1988. Pounds of turkey produced in 1989 totaled 54.2 million compared with 70.8 million pounds produced in 1988. This is a 24 percent decrease from the 1988 poundage. Only heavy breed turkeys are produced in Georgia. The average price received per pound was 2 percent more than 1988 and averaged 43.0 cents.

1/ The production year begins Dec. 1 previous year and ends Nov. 30 current year, except turkeys based on Sept. 1-Aug. 31 hatch. 2/ Liveweight equivalent price. 3/ Including home consumption. 4/ From 1984-89 value of sales; 1980-83 gross income; 1956-79 cash receipts. Estimates are not comparable to 1985, 1986 or 1987 due to differences in estimating procedures. 5/ No estimate made distinguising hatching-egg type and table-egg type, only total estimate made. The total estimate is published under 'Hens, table-egg type'. 6/ Refer to footnote 5/. 7/ Production year for turkeys based on Sept. 1-Aug. 31 hatch. 8/ Includes broilers, eggs, chickens and turkeys.

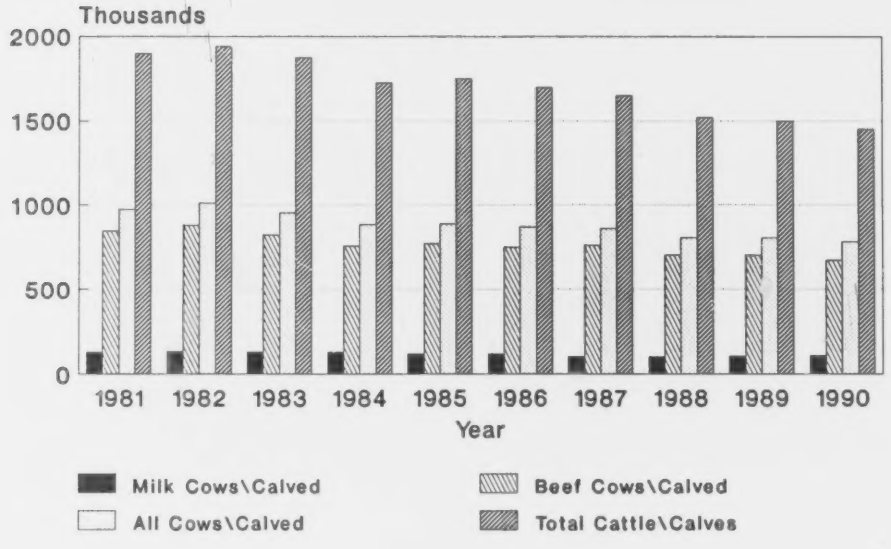
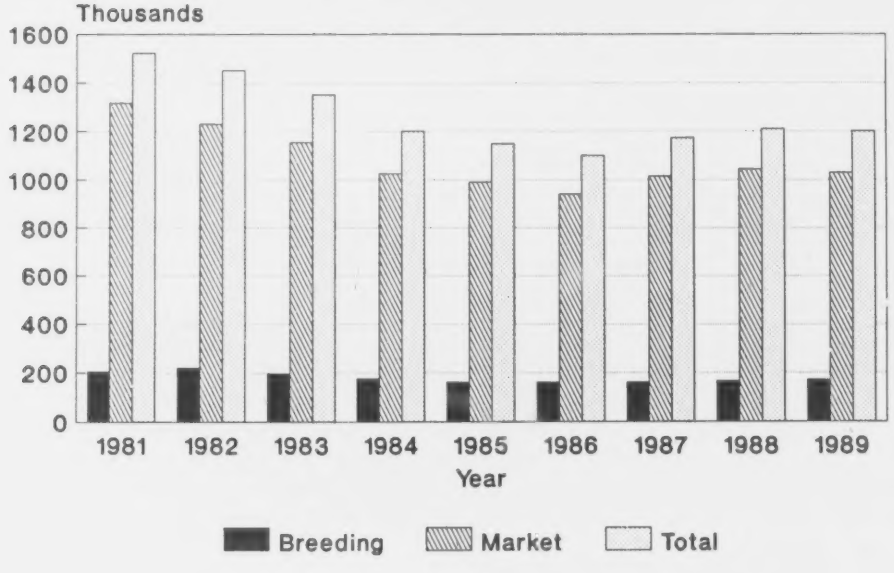
CATTLE AND CALVES - Georgia, January 1, 1981-1990



HOGS AND PIGS - Georgia, December 1, 1981-1989



LIVESTOCK AND DAIRY

HIGHLIGHTS 1989

Georgia's cattle inventory continued to decline during 1989. All cattle and calves on January 1, 1990, totaled 1,450,000 head, down 3 percent from a year ago and the lowest inventory since 1960 when only 1,424,000 head were on farms. Prices during 1989 were up from 1988, and the marketing year average price was $58.90 for beef cattle. Net returns to hog producers rose in 1989, a result of lower corn prices and higher hog prices. The 1989 marketing year average price for all hogs of $42.50 per cwt. was $1.00 higher than in 1988.

Georgia ranked 13th nationally in the number of hogs and pigs on December 1, 1989, and 25th in number of cattle and calves on farms on January 1, 1990. The number of hog operations in Georgia during 1989 totaled 9,000, down 100 from 1988. Cattle operations numbered 32,000--1,000 less than in 1988.

Despite higher feed costs, milk production during 1989 posted a 6 percent rise from a year earlier. Georgia ranked 26th in the Nation in pounds of milk produced. The number of operations and farms with at least one milk cow in 1989 totaled 1,800, up 100 from 1988.

Cash receipts from marketings of dairy and livestock products totaled $693.8 million during 1989, 3 percent above 1988. Higher prices for cattle, calves, milk and hogs were more than enough to offset the decline in hog and cattle marketings.

CATTLE

All cattle and calves on Georgia farms January 1, 1990, totaled 1,450,000 head, 3 percent less than the previous year's total of 1,500,000. The number of beef cows decreased 29,000 head to 671,000, but milk cow numbers rose 5,000 head to 109,000. Cash receipts from the sale of cattle and calves in 1989 increased slightly to $281.1 million. The average price received for cattle was up 2 percent to $58.90 per cwt. Calves averaged $83.40 per cwt., unchanged from the previous year.

The inventory value for all cattle and calves on January 1, 1990, totaled $775.8 million, up 1 percent from a year earlier and a record high. Average value per head at $535 compared with the $510 per head value on January 1, 1989.

The 1989 calf crop totaled 670,000 head, 6 percent less than the previous year. Morgan and Carroll Counties captured the lead in number of cattle and calves with 28,000 head on January 1, 1990. Colquitt County followed with 27,000 head and Jackson County was third with 25,000 head.

HOGS

There were 1,200,000 hogs and pigs on Georgia farms on December 1, 1989, down 1 percent from the previous year. Breeding inventory increased 3 percent to 170,000 head. Hog cash receipts, at $187.1 million for 1989, were up from $184.8 million for 1988. The average value of hogs and pigs on hand December 1, 1989, was $72.00 per head, up $15.00 from the previous year. The total value of Georgia's hog inventory on December 1, 1989, totaled $86.4 million compared with $69.0 million a year earlier.

Georgia pork producers had 256,000 sows to farrow from December 1, 1988 through November 30, 1989. This was slightly less than the previous year. The average number of pigs saved per litter in 1989 was 7.77 resulting in a pig crop of 1.99 million head. The pig crop was down 3 percent from the previous year. Colquitt County led all counties in the number of hogs and pigs on farms with 75,000 head followed by Coffee County with 51,000 head.

RED MEAT PRODUCTION

Red meat production for Georgia during 1989 totaled 362 million pounds, up 16 percent from 1988. Production included beef, veal, pork, lamb and mutton slaughtered in commercial establishments. Hogs killed totaled 1,478,400 head, up 24 percent from 1988. Average live weight for hogs slaughtered decreased 1 pound to 239. Cattle slaughter during 1989 totaled 193,700 head, down 5 percent from 1988. Average live weight of cattle slaughtered in 1989 was 949 pounds, up 25 pounds from 1988. Calves slaughtered in 1989 numbered 15,400 head, down 3 percent from the previous year. There were 1,400 head of sheep and lambs slaughtered in 1989, up 400 head from 1988.

MILK PRODUCTION

Georgia's 1989 milk production increased 6 percent to 1.30 billion pounds. The average number of milk cows rose 3 percent to 107,000 head. The annual production per cow at a record high 12,178 pounds, increased 303 pounds from 1988. Cash receipts from marketing totaled $196.3 million in 1989, 12 percent more than the previous year. Milk prices averaged $15.10 per cwt. in 1989 compared with $14.30 per cwt. in 1988. Putnam County was the leading county in number of milk cows on January 1, 1990, with 10,400 head followed by Morgan County with 9,300 head.

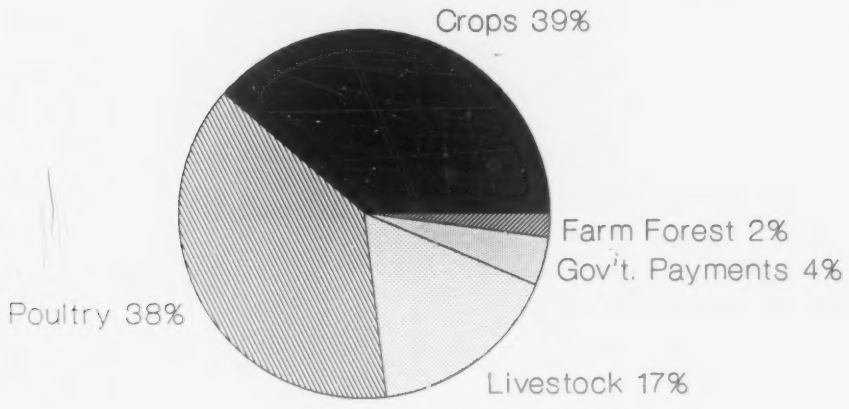
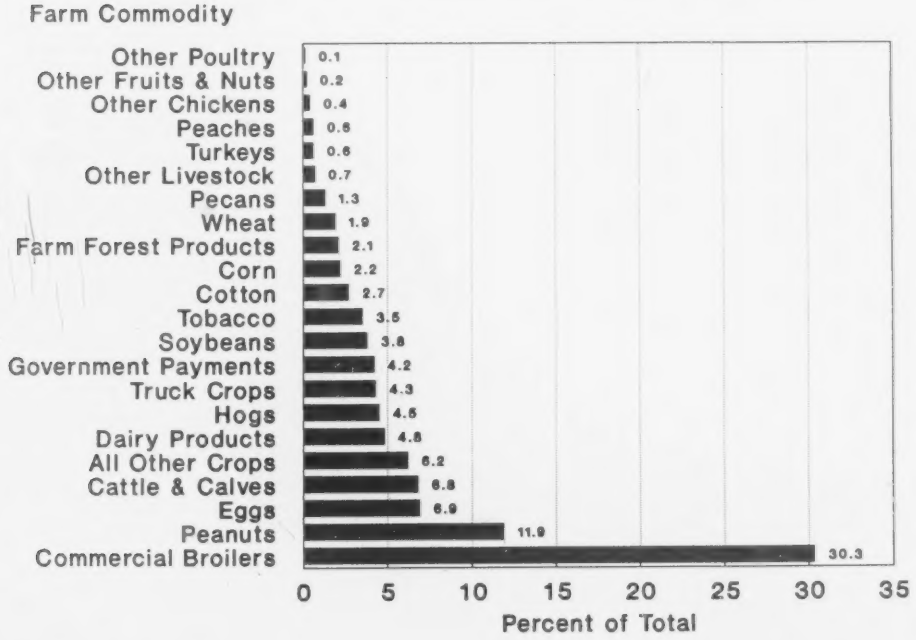
TOTAL FARM CASH RECEIPTS - Georgia, 1989



PERCENTS OF TOTAL BY COMMODITY



FARM INCOME AND EXPENSES

1989 HIGHLIGHTS

Georgia's 1989 cash farm income increased to $4.17 billion, 8 percent above 1988 and a new record high. The increase was due partially to increased crop production. Also, contributing to the increase was a record high broiler production which sold for a record high price. Egg prices were the highest in 5 years. Receipts from farm marketings increased $299 million or 8 percent from 1988. Other farm income, excluding government payments, rose $5.0 million or 4 percent.

Georgia farmers' gross farm income for 1989 rose 9 percent to $4.34 billion. Gross farm income includes cash income, non-cash income, and inventory adjustments. A positive farm inventory adjustment of $41.2 million compares to a negative $7.60 million adjustment in 1988. Farm production expenses at $3.12 billion were $235.7 million or 8 percent above 1988 and the highest since 1984. Net farm income for 1989 was a record $1.22 billion, up 10 percent from 1988.

1989 CASH RECEIPTS

Georgia farm products sold during 1989 including government payments and farm forest products generated cash receipts of $4.13 billion, 8 percent above the $3.83 billion for 1988. Crops accounted for 38.7 percent of the total, down from 40.6 percent in 1988. Poultry accounted for 38.2 percent of the total and livestock and livestock products accounted for 16.8 percent.

Crop cash receipts totaled $1.60 billion in 1989, up 3 percent from 1988. Peanuts accounted for 12.0 percent of the total cash receipts from receipts of $494 million. Soybean receipts at $159 million rose 1 percent and accounted for 3.8 percent of the total cash receipts. Tobacco receipts, at $146 million, were 5 percent above 1988. Corn receipts increased 28 percent and accounted for 2.2 percent.

The 1989 poultry cash receipts at $1.58 billion, increased 17 percent from 1988. Broiler receipts totaled $1.25 billion, representing 30.3 percent of total cash receipts. Broilers continued to rank as Georgia's leading gross sales commodity. Eggs advanced one position to third place among all commodities with receipts of $286 million or 6.9 percent of the total cash receipts.

Cash receipts from livestock and products totaled $693 million in 1989, up 3 percent. Cattle and calves receipts at $281 million were up less than .5 percent from 1988 and accounted for 6.8 percent. Hog receipts at $187 million rose 1 percent from last year. Dairy products accounted for $196 million, a 12 percent increase from 1988.

Farm forest products and government payments at $88.3 million and $173 million, respectively, accounted for 6.3 percent of the total. In 1988, farm forest products and government payments accounted for 6.8 percent of the total.

1989 FARM PRODUCTION EXPENDITURES

Farm production expenditures totaled $3.12 billion in 1989, up 8 percent from the $2.88 billion spent in 1988. The 1989 farm production expenditures were the highest since 1984 when farmers' expenditures totaled $3.16 billion. Expenditures increased for all major categories except interest. Interest cost was at the lowest level for any year during the 1980's and down 1 percent from 1988.

Feed, at $962.2 million, was again the largest expenditure category and accounted for 30.9 percent of Georgia's production expenses. Feed expenditures increased 8 percent from 1988.

Expenditures that increased in 1989 included livestock and poultry at $174 million, up 9 percent; seed at $76.3 million, up 14 percent; fertilizer and lime at $178 million, up 12 percent; pesticides $135 million, up 29 percent; fuel and oil at $105 million, up 8 percent; repairs and maintenance at $138 million, up 13 percent; other miscellaneous at $327 million, up 14 percent; capital consumption at $278 million, up 4 percent. Property taxes increased 10 percent to $69.6 million, wages to hired labor was up 6 percent to $203 million, and net rent to non-operator landlords increased 1 percent to $119 million in 1989. Electricity expenses declined 6 percent to $36.5 million.

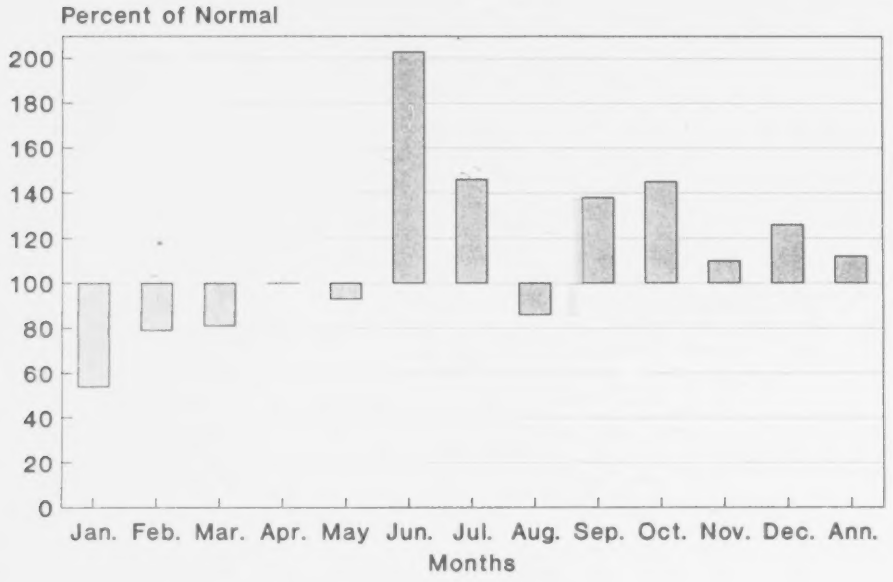
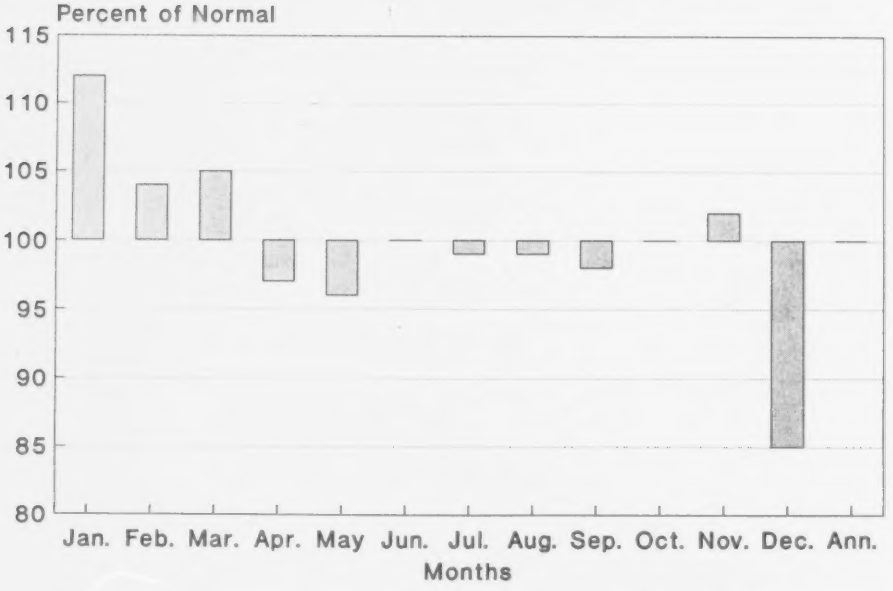
PRECIPITATION - Percent of Normal by Month and Annually, Georgia, 1989



TEMPERATURE - Percent of Normal by Month and Annual Average, Georgia, 1989



GENERAL

WEATHER AND CROP HIGHLIGHTS - 1989

Most of the State received above normal rainfall during the year. As a result, rivers, lakes, and other water supplies had a chance to replenish after several dry years. North Georgia received the most rain with 70 to 90 inches reported in the mountains. The rest of the State averaged 40 to 60 inches.

Temperatures for the year averaged near normal. January, February, and March all averaged warmer than usual. The mild temperatures during January caused low chill peach varieties to bloom in the south. A freeze in late February caused frost damage to some small fruit, peaches and small grains. March found powdery mildew and Hessian fly increasing in the wheat crop in the south. During April, farmers made excellent progress in all field activities. May began with ample rainfall, but by the end of the month soil moisture supplies were mostly short. June and July were wet months. The abundant rains kept crops in mostly good condition, but the sodden soils slowed most field activities. Weather conditions in August were ideal for crop harvest, haying, and chemical applications. Apple harvest was in full swing in September and Hurricane Hugo brought more rains to the northern and eastern portions of the State. October temperatures were near normal as pecan harvest got underway. November brought cooler temperatures with an across the State freeze during the third week. The last month of the year was unseasonably cold. At the end of the second week of December, harvest of late crops was virtually complete.

JANUARY

January was an unseasonably warm month. Statewide, temperatures averaged a mild 51.1 degrees, 5.6 degrees above normal. Temperatures climbed to a pleasant 83 degrees on several days in the southeast. Lowest temperatures ranged from the upper teens and 20s in the mountains, to around freezing central, with mid 30s in the south. Not much rain or snow fell during the month. Precipitation averaged only 2.53 inches, 2.12 inches below normal. At the end of the month soil moisture levels were rated short in the north and south, but adequate in the north central and central regions of the State. The mild temperatures mixed with scattered showers provided good growing conditions for small grains, but also caused peach trees to bloom early in the south. By mid month, harvest of cotton, pecans, and soybeans was nearly completed.

FEBRUARY

February was another warm month with an average temperature of 50.2 degrees. This was 2.1 degrees above normal. However, a hard freeze occurred statewide from the 23rd through the 25th. Temperatures plunged into the teens and mid 20s all the way to the Florida border. Precipitation across the State averaged 3.59 inches, 0.94 inch below normal. The rains were especially beneficial to north Georgia with totals of 5 to 7 inches common. Elsewhere, rain totals were 1 to 4 inches. At the end of the month, soil moisture supplies were short to adequate statewide.

Crop conditions at month's end included cold weather damage to strawberries, blueberries, early peach varieties (particularly across south Georgia), and wheat at the jointing stage.

MARCH

Statewide, the average temperature for March was near normal at 57.7 degrees. However, regional temperatures fluctuated 1 to 4 degrees above normal. Highs ranged from the low 80s in the north to the mid and upper 80s central and south. Lows ranged from the mid 20s in the mountains, low 30s elsewhere in the north, and low to mid 30s central and south. Precipitation averaged 4.49 inches, 1.08 inches below normal for the month. The year to date rainfall deficits by the end of March averaged 3 to 7 inches below normal.

The February freeze severely damaged the peach crop in the southern areas, while only thinning some varieties in central Georgia. Most varieties received an adequate number of chill hours with the exception of some late season varieties in the southern areas. The wheat crop however, suffered varied amounts of freeze damage. Early plantings were hurt the worst with most damage in the southern third of the State. A high incidence of powdery mildew and Hessian fly damage was also reported in the southern areas. Corn planting was active toward the end of the month, and land preparation for spring crops was ahead of normal in most areas.

APRIL

The first half of April was cool and wet over most of the State. Rain fell on 7 to 11 days. The ample rain improved water levels in reservoirs and irrigation ponds, but put land preparation, planting, and other field work behind schedule. Soil moisture supplies at mid-month were 97 percent adequate to surplus. Statewide precipitation averaged 4.18 inches. By month's end, warm, dry weather prevailed. Farmers made excellent progress in all field activities. Peanut planting was one-fifth of the way complete, cotton planting was ahead of the previous year, and about half of the onion crop had been harvested. The hot, dry conditions also helped reduce the spread of fungus disease in the wheat crop. Temperatures averaged 61.8 degrees, just 1.8 degrees below normal.

MAY

May began very much like April, cool and damp. Soil moisture supplies were adequate to surplus. The cool temperatures the first half of the month slowed germination of cotton, soybeans, and peanuts. Farmers replanted cotton in some south Georgia counties because of damage from blowing sand. Though May began with ample rainfall, the last two weeks of the month were warm and dry. Soil moisture supplies shrank to mostly short levels. The dry weather allowed farmers to make good progress in harvesting peaches, wheat, and hay, but the lack of moisture stressed the corn crop in some areas. Tobacco conditions also declined. Average temperature for the State was 68.2 degrees, 2.5 degrees cooler than normal. Problems with weeds, insects, and plant diseases were reported on the increase at month's end.

JUNE

June was an exceptionally wet month. Precipitation averaged 8.78 inches, 4.46 inches more than normally received for that time of year. Rain was reported 11 to 18 days at almost all reporting stations. Temperatures averaged near normal for the month at 76.9 degrees. Highs ranged from the low 90s north, to the mid and upper 90s central and south. Overnight lows were in the low to mid 50s north with mostly mid 60s central and south.

The plentiful rains kept soil moisture at optimum levels and was beneficial to most crops with the exception of small grains. Wheat remaining for harvest rapidly deteriorated due to lodging and rot. The excessive moisture also caused a high incidence of brown rot in peaches. High winds in the eastern part of the State damaged some tobacco fields and uprooted pecan trees. On the other hand, corn especially benefitted from the rains as a good portion of the crop was in the critical silking stage. The showers also came at a critical time for much of the peanut crop, during the blooming and pegging stages.

JULY

The State received a sufficient amount of rain during July. Most stations reported rain on at least 15 days. Precipitation averaged 7.90 inches, 2.46 inches above normal. Rain totals ranged from 5 to 8 inches with local totals exceeding 10 inches. The abundant rains kept crops in mostly good condition. However, many fields were too wet to make much progress in planting, harvesting, or in pest control. Spraying schedules for insects and diseases were constantly delayed and insect populations continued to build, especially in cotton. Weeds grew rapidly in many peanut and soybean fields. At the end of the month, soil moisture supplies were 97 percent adequate to surplus, corn harvest was underway and white mold was showing up in peanuts. Temperatures during the month averaged near normal at 78.9 degrees.

AUGUST

After a wet June and July, much of the State experienced drier weather during the month of August. Weather conditions were ideal for haying, harvesting of crops, and chemical applications. Tobacco harvest was very active, remaining ahead of both the previous year and the average the entire month. Insect pressure and diseases continued to build in cotton, peanuts, and soybeans. Aphids and bollworms increased in cotton, and white mold and tomato spotted wilt virus were infecting peanuts. Stinkbugs and loopers were on the increase in many soybean fields.

Temperatures averaged near normal at a pleasant 78.4 degrees. Warmest temperatures ranged from 90 in the mountains to the upper 90s central and south. The coolest lows were in the low 50s in the mountains to low 60s central and south. Precipitation averaged 3.83 inches, just 0.6 of an inch below normal.

SEPTEMBER

September began with apple harvest in full swing in north Georgia, and corn harvest making good progress in the southern half of the State. By mid month, pecan shucks had started opening in some groves, and mite infestations were reported heavy in central Georgia. Precipitation began with scattered showers across the State but became more numerous as the month progressed. During the latter part of the month, Hurricane Hugo brought an abundant amount of rain to the northern and eastern portions of the State. Soil moisture supplies were rated 93 percent adequate or surplus. Precipitation averaged 5.71 inches, 1.56 inches more than the norm for that time of year. Temperatures across the State averaged 73.0 degrees, 1.3 degrees cooler than normal.

OCTOBER

Temperatures during October averaged within a tenth of a degree of normal at 63.9 degrees. Highs were in the low to mid 80s north to near 90 degrees south. Lows ranged from the mid 20s in the mountains, to the upper 30s in the southeast. Precipitation averaged 3.77 inches, 1.17 inches above normal. Dry weather the last half of the month enabled farmers to complete most of the peanut, sorghum, and corn harvest. Pecan harvest also got underway during the month, and farmers made good progress in harvesting and defoliating cotton. At month's end, peanuts threshed was ahead of the previous year and average. Harvest of apples, corn and hay was also active.

NOVEMBER

Temperatures for November averaged 55.4 degrees,1.1 degree cooler than normal. Highs ranged from the mid and upper 70s in the mountains to the low 80s central and mid 80s in the extreme south. The largest amount of rain during November fell in the north and southwest with lighter amounts in the southeast. Precipitation averaged 3.29 inches, just slightly above normal for the time of year. Harvest operations moved ahead rapidly during the first two weeks of the month. The rains held off till mid month when they were needed for the germination and growth of small grains and winter cover crops. Freezing temperatures and frost crept across the State during the third week of November. Only minor damage occurred to the State's cotton crop.

DECEMBER

December was an unseasonably cold month. Temperatures averaged a chilly 40.1 degrees, 7.3 degrees below normal. Highs ranged from the mid 60s in the mountains to the mid 70s in the south. Lows in the single digits were common across the northern half of the State. The coldest temperature was a minus 6 recorded at Blairsville. Snow was recorded over the mountains and along the Florida border and coast. Rain was reported on 7 to 11 days at all reporting stations. Precipitation averaged 5.28 inches, 1.09 inches above normal.

By the end of the second week, harvest of late crops was nearly complete. Soybean harvest, which had a slow start and slow season, moved ahead of average and was equal to the previous year's average. Only 12 percent of the pecan crop remained to be harvested. Pecan production and quality were very disappointing.

1/ Prior to 1975, defined as places of 10 acres or more that had annual sales of agricultural products of $50 or more and places of less than 10 acres that had annual sales of $250 or more. Beginning with 1975, a farm is a place as of June 1, that sells or could sell $1,000 of agricultural products during the year. 2/ Not available prior to 1965. 3/ As of March 1, 1962–1975; changed to February 1, 1976–1981; April 1, 1982–1985, February 1, 1986–1989; Jan. 1, 1990. Average value includes land and buildings.

FARM REAL ESTATE—Values, Cash Rent, Georgia, 1976–1990

Year	Farm Real Estate Values			Average Cash Rent	
	Total Value 1/	Value of Farm Buildings	Average Value per Farm 2/ 3/	Per Acre Cropland	Per Acre Pasture
	——Million Dollars——		Dollars	——Dollars——	
1976	7,606	1,392	126,800		
1977	8,708	1,541	147,600	32.90	16.50
1978	10,279	1,768	174,200	30.60	17.80
1979	11,888	1,973	201,500	36.10	19.00
1980	13,440	2,164	227,800	35.00	19.80
1981	14,080	2,244	234,600	35.20	20.00
1982	12,96[illegible]	2,046	227,400	33.10	19.60
1983	12,727	1,988	231,405	34.90	19.80
1984	12,437	1,901	243,871	32.68	21.00
1985	11,968	1,788	239,352	30.30	21.00
1986	11,345	1,657	231,521	27.80	19.40

ESTIMATES ISSUED BY GEORGIA AGRICULTURAL STATISTICS SERVICE

Current estimates of many data items included in this publication are available from the Georgia Agricultural Statistics Service, at various times throughout the year. The table below indicates the months data are available. Current data may be obtained by calling the Georgia Agricultural Statistics Service or interested persons may be added to one or more of our five mailing lists. The five separate mailing lists are: (1) Weekly Weather and Crops, (2) Weekly Broiler Report, (3) Georgia Agricultural Facts, (4) Georgia Poultry Facts, and (5) Georgia Farm Report, a semi-monthly publication containing various crop, livestock, price and other farm data. The annual charge for these publications is: Weekly Weather and Crops, $12; Weekly Broiler Report, $15; Georgia Agricultural Facts, $5; Georgia Poultry Facts, $5;' and Georgia Farm Report, $10. Reports are available free of charge to farmers and agribusiness firms who provide the basic data on which reports are based. Within availability constraints, a copy of the Georgia Agricultural Facts and Poultry Facts is available to Georgia residents without charge. An order form may be obtained by calling (404)546-2236 or writing the Georgia Agricultural Statistics Service, Stephens Federal Building, Suite 320, Athens, Georgia 30613.
